Q1.

Question Number	Answer	Mark
	A	1

Q2.

Question Number	Answer	Mark
	C	1

Q3.

Question Number	Acceptable answers	Additional guidance	Mark
	<ul style="list-style-type: none"> • Initial <u>acceleration</u> due to a resultant force (1) • Decreasing acceleration as resistive forces increase (1) Or Decreasing acceleration as resultant force decreases • No acceleration as resultant force is zero (1) Or constant velocity as resultant force is zero 	<p>Accept reference to gradient of graph for acceleration for MP2 & MP3.</p> <p>Accept terminal velocity for constant velocity</p>	3

Q4.

Question Number	Answer	Mark																								
(a) (i)	<p>Each row of the table contains a suitable method. One mark for each column, do not allow a mix and match of methods (rows)</p> <table border="1"> <thead> <tr> <th>Distance measured with the metre rule</th> <th><u>Corresponding</u> time</th> <th><u>Correct</u> use of measurements referred to in columns 1 and 2</th> <th>To calculate g use: (formula/expression seen)</th> </tr> </thead> <tbody> <tr> <td>Record the position on the rule for each frame</td> <td>Time between frames</td> <td>Plot distance against t^2</td> <td>$g = 2 \times \text{gradient}$</td> </tr> <tr> <td>Measure distance between (successive) frames against a metre rule</td> <td>Time between frames</td> <td>Calculate the speed each frame using distance /time and plot against time</td> <td>$g = \text{gradient}$</td> </tr> <tr> <td>Use metre rule to measure: (total) distance ball falls through Or height from which the ball was dropped (e.g. 1 m)</td> <td>Number of frames \times time between frame Or total time of journey recorded/found</td> <td>Use of: $s = ut + \frac{1}{2} at^2$ Or $s = \frac{1}{2} at^2$ Or $s = \frac{1}{2} gt^2$</td> <td>$g = 2s/t^2$ Or Re-arrange $s = \frac{1}{2} gt^2$ substituting in s and t to find g.</td> </tr> <tr> <td>Measure distance between frames (at beginning and) end of drop using the rule</td> <td>Time between frames known and count frames Or if stated $u = 0$ then time for ball to fall and the time between frames.</td> <td>Use speed = $\Delta s/\Delta t$ to find their final velocity using correct time interval [may take u as 0]</td> <td>$g = (v-u)/t$ Or $a = (v-u)/t$</td> </tr> <tr> <td>Record the position on the rule each frame</td> <td>Time between frames</td> <td>Calculate the speed each frame using d/t and plot a graph of v^2 against s.</td> <td>Gradient/2 = acceleration</td> </tr> </tbody> </table> <p>Accept metre stick or ruler in place of metre rule (The candidate may refer to the acceleration of free fall as 'a' or 'g')</p>	Distance measured with the metre rule	<u>Corresponding</u> time	<u>Correct</u> use of measurements referred to in columns 1 and 2	To calculate g use: (formula/expression seen)	Record the position on the rule for each frame	Time between frames	Plot distance against t^2	$g = 2 \times \text{gradient}$	Measure distance between (successive) frames against a metre rule	Time between frames	Calculate the speed each frame using distance /time and plot against time	$g = \text{gradient}$	Use metre rule to measure: (total) distance ball falls through Or height from which the ball was dropped (e.g. 1 m)	Number of frames \times time between frame Or total time of journey recorded/found	Use of: $s = ut + \frac{1}{2} at^2$ Or $s = \frac{1}{2} at^2$ Or $s = \frac{1}{2} gt^2$	$g = 2s/t^2$ Or Re-arrange $s = \frac{1}{2} gt^2$ substituting in s and t to find g.	Measure distance between frames (at beginning and) end of drop using the rule	Time between frames known and count frames Or if stated $u = 0$ then time for ball to fall and the time between frames.	Use speed = $\Delta s/\Delta t$ to find their final velocity using correct time interval [may take u as 0]	$g = (v-u)/t$ Or $a = (v-u)/t$	Record the position on the rule each frame	Time between frames	Calculate the speed each frame using d/t and plot a graph of v^2 against s.	Gradient/2 = acceleration	(1) (1) (1) (1)
Distance measured with the metre rule	<u>Corresponding</u> time	<u>Correct</u> use of measurements referred to in columns 1 and 2	To calculate g use: (formula/expression seen)																							
Record the position on the rule for each frame	Time between frames	Plot distance against t^2	$g = 2 \times \text{gradient}$																							
Measure distance between (successive) frames against a metre rule	Time between frames	Calculate the speed each frame using distance /time and plot against time	$g = \text{gradient}$																							
Use metre rule to measure: (total) distance ball falls through Or height from which the ball was dropped (e.g. 1 m)	Number of frames \times time between frame Or total time of journey recorded/found	Use of: $s = ut + \frac{1}{2} at^2$ Or $s = \frac{1}{2} at^2$ Or $s = \frac{1}{2} gt^2$	$g = 2s/t^2$ Or Re-arrange $s = \frac{1}{2} gt^2$ substituting in s and t to find g.																							
Measure distance between frames (at beginning and) end of drop using the rule	Time between frames known and count frames Or if stated $u = 0$ then time for ball to fall and the time between frames.	Use speed = $\Delta s/\Delta t$ to find their final velocity using correct time interval [may take u as 0]	$g = (v-u)/t$ Or $a = (v-u)/t$																							
Record the position on the rule each frame	Time between frames	Calculate the speed each frame using d/t and plot a graph of v^2 against s.	Gradient/2 = acceleration																							

(a) (ii)	<p>Ball may be released between 1st and 2nd images (so times used all too long because they include a short time before it is dropped) Or ball released before the 1st image so u is not 0 Or the ruler is not vertical/straight Or the idea that the camera has not been calibrated correctly i.e. runs too fast/slow Or the idea that there is a parallax error from camera to object</p> <p>(Parallax alone is insufficient) (Do not award a mark for air resistance)</p>	(1)	1								
(b)	<p>Small / dense / streamlined shape / smooth surface / shiny</p> <p>Correct explanation, e.g.: Small surface area– minimise drag Dense – weight > upthrust Or weight > drag Streamlined / aerodynamic– minimise drag Or ensure laminar flow Smooth surface – minimise drag Or ensure laminar flow Shiny – easy to see on the recording Small – easier to read scale (precisely)</p> <p>(Sphere is not acceptable for a property but statement such as ‘sphere to minimise drag’ can score 2nd mark)</p>	(1)	2								
(c)	<p>Advantage Explanation (to score both marks the explanation must be linked to the advantage. Accept reverse arguments. Human error is not sufficient for reaction time).</p> <table border="1" data-bbox="236 969 1289 1305"> <thead> <tr> <th data-bbox="236 969 464 1003">Advantage</th> <th data-bbox="464 969 1289 1003">Explanation</th> </tr> </thead> <tbody> <tr> <td data-bbox="236 1003 464 1070">No reaction time</td> <td data-bbox="464 1003 1289 1070">Reduces uncertainties Or (time recorded) more precise/accurate</td> </tr> <tr> <td data-bbox="236 1070 464 1171">Can be paused /stopped to take readings.</td> <td data-bbox="464 1070 1289 1171">Measurements taken at exact times Or positions against rule recorded more accurately. Or velocities can be calculated frame by frame (more readings)</td> </tr> <tr> <td data-bbox="236 1171 464 1305">Allows repeated playback Or rewinding</td> <td data-bbox="464 1171 1289 1305">Allows values to be checked/confirmed Or values obtained are more reliable</td> </tr> </tbody> </table>	Advantage	Explanation	No reaction time	Reduces uncertainties Or (time recorded) more precise/accurate	Can be paused /stopped to take readings.	Measurements taken at exact times Or positions against rule recorded more accurately. Or velocities can be calculated frame by frame (more readings)	Allows repeated playback Or rewinding	Allows values to be checked/confirmed Or values obtained are more reliable	(1) (1)	2
Advantage	Explanation										
No reaction time	Reduces uncertainties Or (time recorded) more precise/accurate										
Can be paused /stopped to take readings.	Measurements taken at exact times Or positions against rule recorded more accurately. Or velocities can be calculated frame by frame (more readings)										
Allows repeated playback Or rewinding	Allows values to be checked/confirmed Or values obtained are more reliable										

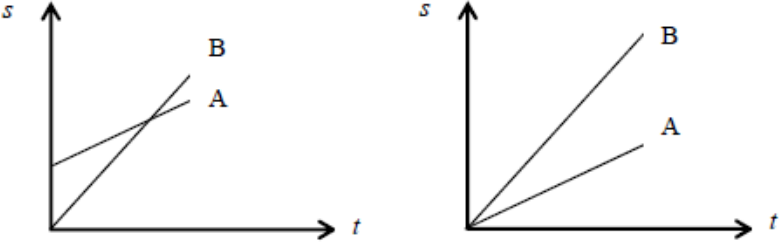

Q5.

Question Number	Answer	Mark
(a)	Same (downwards) acceleration Or acceleration = g (accept constant acceleration)	(1) 1
(b)(i)	The ball is in contact with the floor (accept the ball bounces)	(1) 1
(b) (ii)	Lower gradient Or the lines would be not be as steep	(1) 1
(c)	Use of equation(s) of motion to find s Or use of distance = area under the graph Or use of GPE = KE $s = 1.1 \text{ m} - 1.4 \text{ m}$ <u>Example of calculation</u> $(4.7 \text{ m s}^{-1})^2 = (0 \text{ m s}^{-1})^2 + (2 \times 9.81 \text{ m s}^{-2} \times s)$ $s = 1.13 \text{ m}$	(1) (1) 2
(d)(i)	Use of KE = $\frac{1}{2} mv^2$ KE = 1.1 – 1.3 (J) (no ue) <u>Example of calculation</u> KE = $\frac{1}{2} \times 0.40 \text{ kg} \times (2.4 \text{ m s}^{-1})^2$ = 1.15 J	(1) (1) 2
(d)(ii)	Use of GPE = KE $h = 0.27 \text{ m} - 0.32 \text{ m}$ (ecf from 16(d)(i)) (If area under graph or an equation of motion is used e.g. $h = \frac{(u+v)t}{2}$ or $v^2 = u^2 + 2as$ only MP2 can be scored) <u>Example of calculation</u> $h = \frac{1.2 \text{ J}}{0.4 \text{ kg} \times 9.81 \text{ Nkg}^{-1}}$ $h = 0.31 \text{ m}$	(1) (1) 2
(e)	(Elastic potential) energy transferred to thermal energy Or energy dissipated as heat	(1) 1
Total for question		10

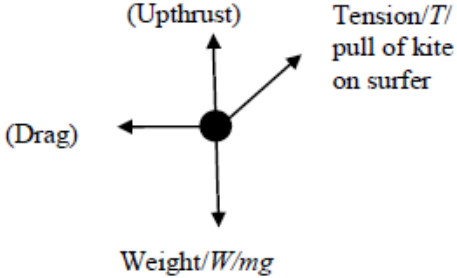

Q6.

Question Number	Answer	Mark
(a)(i)	The ball has bounced Or the ball would be below initial height Or the ball has landed before reaching the goal Or the ball has hit the ground	(1) 1
(a)(ii)	<p>Correct shape of at least one trajectory, starting at the kick and ending at/beyond the goal (1)</p> <p>Range/position of the higher angle > range/position of lower angle ball seen with paths labelled (1)</p> <p>Example of response scoring 2 marks</p> 	(1) 2
(b)(i)	<p>Use of $(u_H) = u \cos 15$ Or $u \sin 75$ Or see $25(.1) \text{ m s}^{-1}$ (1)</p> <p>Use of $u = s/t$ to calculate the time to the goal Or see 0.44 s (1)</p> <p>Use of $(u_V) = u \sin 15$ Or $u \cos 75$ Or see 6.7 m s^{-1} (1)</p> <p>Use of $s = ut + \frac{1}{2} at^2$ (a must be negative) (1)</p> <p>$s = 2.0 \text{ m}$ (1)</p> <p>Use of (value obtained + the 0.22 m (or 0.11 m)) to make a sensible statement as to whether or not the goal will be scored e.g. the top of the ball on reaching the goal 2.23 m. (This is less than 2.4 m and) the goal will be scored (1)</p> <p>(Answer must be consistent with calculated distance. For calculated heights greater than 2.4 m, candidates do not need to refer to radius /diameter but a comparison of heights is needed.)</p> <p><u>Example of calculation</u></p> $t = \frac{11 \text{ m}}{26 \text{ ms}^{-1} \times \cos 15^\circ} = 0.44 \text{ s}$ $s = (26 \text{ m s}^{-1} \times \sin 15^\circ)(0.44 \text{ s}) + (\frac{1}{2})(-9.81 \text{ N kg}^{-1})(0.44 \text{ s})^2$ $s = 2.01 \text{ m}$ <p>Height of the top of the ball on reaching the goal = $2.01 \text{ m} + 0.22 \text{ m} = 2.23 \text{ m}$</p>	(1) 6
(b)(ii)	<p>Air resistance is in the opposite direction to the ball's motion Or air resistance adds a backwards force Or work is done against air resistance (1)</p> <p>The ball will decelerate (horizontally) Or the ball will have a decreasing velocity/speed Or the ball will not travel as far Or this reduces the maximum height the ball reaches Or the ball is in the air for less time Or the ball will take longer to reach the goal (1)</p>	(1) 2
Total for question		11

Q7.

Question Number	Answer	Mark
(i)	<p>Both graphs straight from $t = 0$ (labels not required) (1)</p> <p>Initial gradient of A less than gradient of B (minimum of 1 label required) (1)</p> <p>(The lines do not have to meet i.e. the lines could stop before the meeting point The lines can start anywhere on the displacement axes)</p> 	2
(ii)	<p>Measurement from photographs 0.5 - 0.7 (cm) (1)</p> <p>Use of distance = measurement \times 12 (1)</p> <p>Use of speed = distance/time (1)</p> <p>speed = 0.18 - 0.25 m s^{-1} (1)</p> <p><u>Example of calculation</u> Measurement = 0.55 cm Distance = $0.55 \times 10^{-2} \text{ m} \times 12 = 6.6 \times 10^{-2} \text{ m}$ speed = $\frac{6.6 \times 10^{-2} \text{ m}}{0.33 \text{ s}}$ speed = 0.20 m s^{-1}</p>	4

Q8.

Question Number	Answer	Mark
(a)(i)	<p>Tension line and arrow correctly drawn and labelled (1) Weight line and arrow correctly drawn and labelled (1)</p> <div style="text-align: center;">  </div> <p>(Tension can be on either side. If 2 marks have been awarded subtract 1 mark if the drag has been included and is not a horizontal force opposing the tension)</p>	2
(a)(ii)	<p>Use of correct trig function to find horizontal component of the tension (1) $T_{\text{horizontal}} = 840 \text{ (N)}$ (1)</p> <p><u>Example of calculation</u> Horizontal component of tension = $T \cos \theta$ $T_{\text{horizontal}} = 1100 \text{ N} \times \cos 40^\circ$ $T_{\text{horizontal}} = 843 \text{ N}$</p>	2
(a)(iii)	<p>$T_{\text{vertical}} = 1100 \sin 40^\circ$ Or $T_{\text{vertical}} = 707 \text{ (N)}$ seen (1)</p> <p>Use of $W = mg$ (1)</p> <p>Use of $mg = U + T_{\text{vertical}}$ with a sensible statement discussing what would happen if $T_{\text{vertical}} = W$ Or $T_{\text{vertical}} > \text{weight}$ Or $T_{\text{vertical}} < \text{weight}$ (1)</p> <p>e.g. $T_{\text{vertical}} = W$ Or mass = 72 kg: Upthrust is zero $T_{\text{vertical}} > \text{weight}$ Or mass < 72 kg: Can't have a negative upthrust $T_{\text{vertical}} < \text{weight}$ Or mass > 72 kg: To provide some upthrust</p> <p><u>Example of calculation</u> $T_{\text{vertical}} = T \sin 40^\circ (= 707 \text{ N})$ OR $mg = U + T_{\text{vertical}}$ $mg = U + 707 \text{ N}$ $\text{mass} = \frac{707 \text{ N}}{9.81 \text{ N kg}^{-1}} = 72.1 \text{ kg}$</p>	3

*(b)	(QWC – work must be clear and organised in a logical manner using technical terminology where appropriate)		
	C	(1)	
	Max 3 The horizontal component of the tension in the line produces the forward force acting on the surfer Or horizontal component of tension = $T \cos \theta$ (accept $T_{\text{horizontal}} = 1100 \cos \theta$)	(1)	
	As the angle to the horizontal (θ) decreases Or As the angle to the vertical (θ) decreases $\rightarrow T \cos \theta$ increases Or the forwards force on the surfer increases Or the smallest θ gives the maximum/greatest force	(1)	
	Work done increases	(1)	
	Power transferred to surfer = $\frac{\text{work done}}{\text{time}}$ has increased hence the power increases Or more work done per second on the surfer so the power increases	(1)	4
Total for question			11

Q9.

Question Number	Answer	Mark
(i)	Weight/ W/mg Upthrust/ U Drag/Friction/Fluid resistance/ $F/D/V$ (all lines must touch the black dot and should be approximately vertical by eye) (-1 for each additional force)	(1) (1) (1) 3
	<p>The diagrams show three force vectors acting on a bubble, represented by a black dot. In each diagram, an upward arrow is labeled 'upthrust'. In the first diagram, a downward arrow is labeled 'drag' and 'weight'. In the second diagram, a downward arrow is labeled 'drag and/or weight'. In the third diagram, two downward arrows are labeled 'drag' and 'weight'.</p>	
(ii)	(QWC – work must be clear and organised in a logical manner using technical terminology where appropriate) <u>Upthrust</u> is greater for the larger bubble Drag/friction increases Upthrust increases more than drag Or greater (initial) resultant force on bubble Or higher terminal velocity Or upthrust is related to volume/radius ³ and drag related to area/radius ⁽²⁾	(1) (1) (1) 3
