## **Mark Scheme**

Q1.

Question Number	Answer	Mark
	B	1

Q2.

Question Number	Answer	Mark
	A	1

Q3.

Question Number	Answer	Mark
(a)	Lowest / minimum frequency (of light / photons incident on a metal) that will cause electrons to be emitted (from surface) Or the frequency of (light / photons) that will cause electrons to be emitted (from the surface of a metal) with zero kinetic energy (1) (accept only just emitted)	1
(b)	Conversion of eV to J (1) Use of $E = hf$ (1) $f = 5.5 \times 10^{14}$ Hz (1)  <u>Example of calculation</u> $\phi = (2.28 \text{ eV} \times 1.6 \times 10^{-19} \text{ C})$ $= 3.65 \times 10^{-19} \text{ J}$ $f = 3.65 \times 10^{-19} \text{ J} / 6.63 \times 10^{-34} \text{ J s} = 5.50 \times 10^{14} \text{ Hz}$	3

Q7.

Question Number	Answer	Mark
	electron emitted by absorption of light/UV/photon (1)	
	one photon absorbed by one electron (1)	
	if frequency above threshold frequency then electron emitted Or if photon energy above work function energy then electron emitted (1)	
	Use of $hf = \phi$ (using work function to find corresponding frequency or wavelength) Or Use photon energy = $hf$ (using any identified frequency or wavelength of visible light or UV to find corresponding photon energy) (1)	
	Threshold frequency = $1.0 \times 10^{15}$ Hz Or wavelength = $2.9 \times 10^{-7}$ m Or Photon energy for light = a value between $2.9 \times 10^{-19}$ J and $5.1 \times 10^{-19}$ J Or photon energy for UV = a value between $5.1 \times 10^{-19}$ J and $1.99 \times 10^{-17}$ J (1)	
	State visible light frequency too low / wavelength too long Or compare photon energy to work function (1)	6
	<u>Example of calculation</u> $f = \frac{6.88 \times 10^{-19} \text{ J}}{6.63 \times 10^{-34} \text{ J s}}$ $= 1.0 \times 10^{15} \text{ Hz}$	
	<b>Total for question</b>	<b>6</b>

Q8.

Question Number	Acceptable Answer	Additional Guidance	Mark
(a)	<ul style="list-style-type: none"> <li>As graphene is only 1 atom thick so the CSA/thickness is far smaller than for a sample of steel Or most applications need a thickness greater than one atom Or if more than one layer of graphene is used it will be weaker or the bonds between the layers will not be strong Or Graphene is difficult to manufacture because it has only one atomic layer (1)</li> <li>Although graphene has a greater breaking stress it will break at a lower force (1)</li> </ul>	MP1: accept graphene can only be 1 atom thick but steel can be any thickness  (MP1, treat references to cost/energy as neutral)	2

Question Number	Acceptable Answer	Additional Guidance	Mark
(b)	<ul style="list-style-type: none"> <li>Use of depth of graphite = <math>100 \times</math> diameter of 1 carbon atom</li> <li>Use of cross-sectional area = depth <math>\times</math> (<math>0.5 \times 10^{-3} \text{ m}</math>)</li> <li>Use of <math>\rho = \frac{RA}{l}</math></li> <li><math>\rho = 3.6 \times 10^{-5} \Omega \text{ m}</math> Or <math>36 \mu\Omega \text{ m}</math></li> </ul>	<p>(1)</p> <p>(1)</p> <p>(1)</p> <p>(1)</p> <p><u>Example of calculation</u>            Depth of graphite = <math>100 \times 1.4 \times 10^{-10} \text{ m} = 1.4 \times 10^{-8} \text{ m}</math>            CSA = <math>1.4 \times 10^{-8} \text{ m} \times 0.50 \times 10^{-3} \text{ m} = 7.0 \times 10^{-12} \text{ m}^2</math>  <math>\rho = \frac{1.029 \times 10^6 \Omega \times 7.0 \times 10^{-12} \text{ m}^2}{0.200 \text{ m}} = 3.6 \times 10^{-5} \Omega \text{ m}</math></p>	4

Question Number	Acceptable Answer	Additional Guidance	Mark
(c)	<p>Max 3</p> <ul style="list-style-type: none"> <li>Silicon will only release a (photo) electron for a limited range of frequencies/wavelengths</li> <li>Silicon releases only one (photo) <u>electron</u> per incident photon</li> <li>Greater current (for the same illumination) in graphene</li> <li>Graphene (cells are) more efficient Or graphene cells could be smaller / cheaper / thinner</li> </ul>	<p>(1)</p> <p>(1)</p> <p>(1)</p> <p>(1)</p> <p>MP1: accept single frequency for limited range</p>	3

Q9.

Question Number	Answer	Mark
(a)	Quantum of ... <b>Or</b> (discrete) packet of ... <b>Or</b> discrete quantity of ...  (To score the mark must refer to something relevant e.g. light / energy) Of <u>electromagnetic</u> radiation/energy	(1) (1) <b>2</b>
* (b)	(QWC – Work must be clear and organised in a logical manner using technical wording where appropriate)  describe relevant interaction between single photon and single electron photon energy depends on frequency <b>Or</b> reference to $E = hf$ (must be link to photons/light) if photon energy greater than work function, electron emitted (immediately) whereas for waves energy could build up <b>Or</b> with waves that the electron can absorb energy continuously or over time  so any frequency should work <b>Or</b> but this build up doesn't happen	(1) (1) (1) (1) (1) <b>5</b>
(c)(i)	Use of $4.3 \times 1.6 \times 10^{-19}$  Use of $E = hf$ $f = 1.0 \times 10^{15}$ Hz  <u>Example of calculation</u> $E = 4.3 \text{ V} \times 1.6 \times 10^{-19} \text{ C}$ $= 6.9 \times 10^{-19} \text{ J}$ $6.9 \times 10^{-19} \text{ J} = 6.63 \times 10^{-34} \text{ Js} \times f$ $f = 1.0 \times 10^{15} \text{ Hz}$	(1) (1) (1) <b>3</b>
(c)(ii)	Ultraviolet Accept ultraviolet even if frequency in c(i) is incorrect, but allow ecf from candidate's value of frequency to appropriate part of electromagnetic spectrum	(1) <b>1</b>
<b>Total for question</b>		<b>11</b>

Q10.

Question Number	Acceptable answers	Additional guidance	Mark
(a)	<ul style="list-style-type: none"> <li>(UV radiation consists of) photons (1)</li> <li>One photon interacts with one electron <b>Or</b> energy of photon depends on frequency (1)</li> <li>Electrons released if energy (of photon) greater than work function <b>Or</b> frequency is greater than threshold frequency <b>Or</b> <u>energy</u> supplied is sufficient to remove electron (1)</li> </ul>	Accept quanta/packets of energy	

Question Number	Acceptable answers	Additional guidance	Mark
(b)(i)	<ul style="list-style-type: none"> <li>when slider at the bottom - reading on voltmeter is zero Or minimum resistance - reading on voltmeter is zero (1)</li> <li>When slider at the top – reading on voltmeter is 1.5 V Or maximum resistance - reading on voltmeter is 1.5 V (1)</li> <li>Potential difference split between top and bottom part of resistor (either side of slider) Or reading on voltmeter depends on the ratio of resistances (either side of slider) Or moving the slider changes the resistance that the voltmeter is across (1)</li> </ul>		3

Question Number	Acceptable answers	Additional guidance	Mark
(b)(ii)	Maximum Kinetic Energy of electron = 0.6 (eV) (1)		1

Question Number	Acceptable answers	Additional guidance	Mark
(c)	<p><b>Max 4</b></p> <p>Valid because:</p> <ul style="list-style-type: none"> <li>Moon and photocell both have vacuum (1)</li> <li>Both demonstration and theory use photoelectric effect (1)</li> </ul> <p>Not valid because:</p> <ul style="list-style-type: none"> <li>Different wavelengths in each case (1)</li> <li>On the moon there is dust not metal (1)</li> <li>Dust is free to move but the metal plate is fixed (1)</li> <li>On the moon UV removes electrons from (individual) <u>atoms</u> and in the demo light removes electrons from metal <u>surface</u> (1)</li> <li>Demonstration is based on photoelectric effect but effect on moon could be ionisation (1)</li> </ul>	<p>Full marks can only be scored if a correct link is made between at least one physics point and the demonstration being valid or not valid</p> <p>Accept the same concept for photoelectric effect</p> <p>Accept one uses light the other UV</p> <p>Accept different materials for MP4</p>	4

Q11.

Question Number	Answer	Mark
(a)	<p><b>When illuminated:</b>            Use of the word <u>photon</u> (1)            photons/light cause emission of (photo)electrons (1)            Idea that (photo) electrons form a current (1)            photon energy greater than or equal to work function. (1)</p> <p><b>In darkness:</b>            No photons so no photoelectrons released (1)</p>	5
(b)	<p>Use of <math>E = hf</math> (1)            Conversion of eV to J (1)            One of the 4 values below correct  <math>f = 5.2 \times 10^{14}</math> Hz or <math>\lambda = 5.8 \times 10^{-7}</math> m for caesium  <math>f = 8.8 \times 10^{14}</math> Hz or <math>\lambda = 3.4 \times 10^{-7}</math> m for zinc (1)            Comment that Cs is in the visible range or Zn is ultraviolet – allow even without supporting calculation (1)</p> <p><b>Alternative method</b>            Allow assumed max freq/min wavelength for visible light then, calculation of work function, quoted in eV, comparison with given work functions, conclusion:            Use of (1); work fn (1), in eV (1), comparison (1)</p> <p><b>Example of calculation</b>  <math>f = \phi \div h = (2.14 \times 1.6 \times 10^{-19}) \text{ J} \div 6.63 \times 10^{-34} \text{ J s}</math>  <math>= 5.2 \times 10^{14} \text{ Hz}</math> for caesium  <math>f = \phi \div h = (3.63 \times 1.6 \times 10^{-19}) \text{ J} \div 6.63 \times 10^{-34} \text{ J s}</math>  <math>= 8.8 \times 10^{14} \text{ Hz}</math> for zinc</p>	4
(ci)	<p>Maximum displacement of the wave <b>Or</b> maximum displacement from the mean  <b>Or</b> maximum displacement from equilibrium (1)</p>	1
(cii)	<p><b>Max 3</b></p> <p>Size of the gap (in the soundtrack) determines the amount of light (1)            Amount of light determines number of photons (1)            Number of photons determines number of (photo) electrons (released by phototube) (1)            Number of electrons determines size of current (in the circuit) (1)</p> <p>(Combining MP 1 and 2 by writing “size of the gap determines number of photons” scores 1 mark.            Combining MP 2 and 3 by writing “the amount of light determines number of (photo) electrons” also scores 1 mark)</p>	3
